PROJECTS

AMAZON-CLONE WITH REACT AND FIREBASE

<https://github.com/CurpraCode/amazon-curpra>

This is an ongoing react and firebase project, completed the entire front-end design and currently implementing some cloud functions with firebase and connecting to stripe payment, I have use some cool features of react – context api, react-router, react hooke, bootstrap, material UI and many more.

BAKING AND STUDIO WEBSITE

<https://hepzitworld.netlify.app/>

This website was built using HTML5, CSS3, BOOSTRAP, VANILLA.JS. It consists of a baking and studio company works, you can order for any of those services cakes, photoshoot and makeup fashion inclusive.

MOVIE WEB-API

<https://movieapicurpra.netlify.app/>

In this project, I have used pure HTML5, CSS3, JavaScript and an API that I fetch movie data with a API fetching library Axios, from which consist of a movie images, rating and the likes

UI-JAVASCRIPT CALCULATOR

<https://curpra-calc.netlify.app/>

In this project, I have used pure HTML5 AND CSS3 and some JavaScript functions to build the calculator and make it work, It is also responsive to mobile view.

MINI-ORDER-APP

<https://mini-order-app.netlify.app/>

In this project, I used JavaScript library react.js, API and react-router to build the order app with two pages that links together, profile page of a customer and the summary page of ordered items.
